

MOTOR CONTROL IN PSYCHOLOGY

"The Cinderella of Psychology" 20 years on

Historically, the motor control system has been largely overlooked in psychological studies, despite its critical importance for understanding human behavior. This trend is now gradually, yet unmistakably, changing. We are honored to welcome Prof. David A. Rosenbaum, a distinguished psychologist and leading expert in motor control research, who will share his latest ideas and join fellow speakers in a collaborative discussion on the future of motor control studies in psychology.

Keynote speaker

16 April
2025

 14:00 - 17:30

Keio University, Mita Campus
East Research Building
Global Research Lab (G-Lab)
